

ERASMUS + PROJECT

Our experience with the project has been different from the Danish, Swedish and Italian. In fact, the project has not been fully carried out with our class due to several reasons. One of the main ones, has been the tight schedule we have in second year, in order to prepare our students to successfully pass the external exam. However, as the backbone of the project is the motivation of the students, we have tried to keep that word in mind in order to make our students keep motivated. It is true that we have also been using exit tickets from time to time, to see how successful our teaching was and so, reinforce in that way, those students with certain flaws. So, even if we haven't been able to fully fulfill the project, I am sure I will use it in a near future with students in lower secondary school or first-year upper secondary school students. We think this project is worth our attention and use.
